

## TUNNEL - ANCHOR

is an additional option to tunnel check. It is a stake-out and guidance system for radial tunnel anchors.

TUNNEL-ANCHOR **measures and calculates a free station without any input of point numbers. (patent pending)**

TUNNEL-ANCHOR adjusts radial drilling rigs and checks the position of the borhole

There are two user interfaces:

one for the surveyor – to define all axes, parameters and the design of boreholes.

one for the drilling stuff – to select the actual borehole and to adjust the rigs
